TASK-2 | CSE0001 – Digital Literacy
Build Your Student Digital Portfolio

NAME: *PRIYAL MAHANA*	**BRANCH:** *CSE(AIML)*
REG. NO. : *25BAI10049*	**PROGRAMME:** *B.Tech*

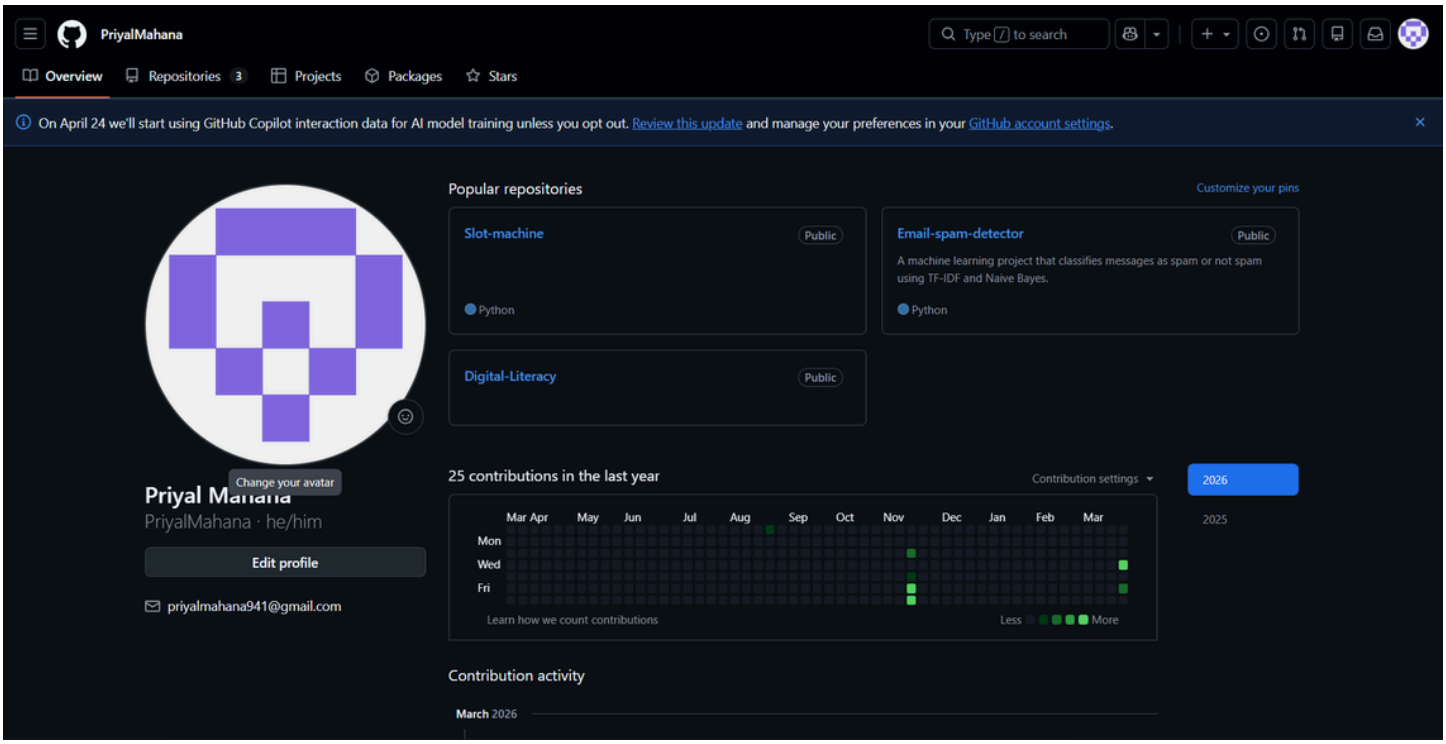
Platforms Set Up:

I created or updated accounts on three platforms: GitHub, LinkedIn, and Kaggle. Details and screenshots for each are below.

1. GitHub — PriyalMahana - Overview

GitHub is the world's largest platform for hosting code and collaborating on software projects. It is used by developers, students, and companies worldwide to share and version-control their work.

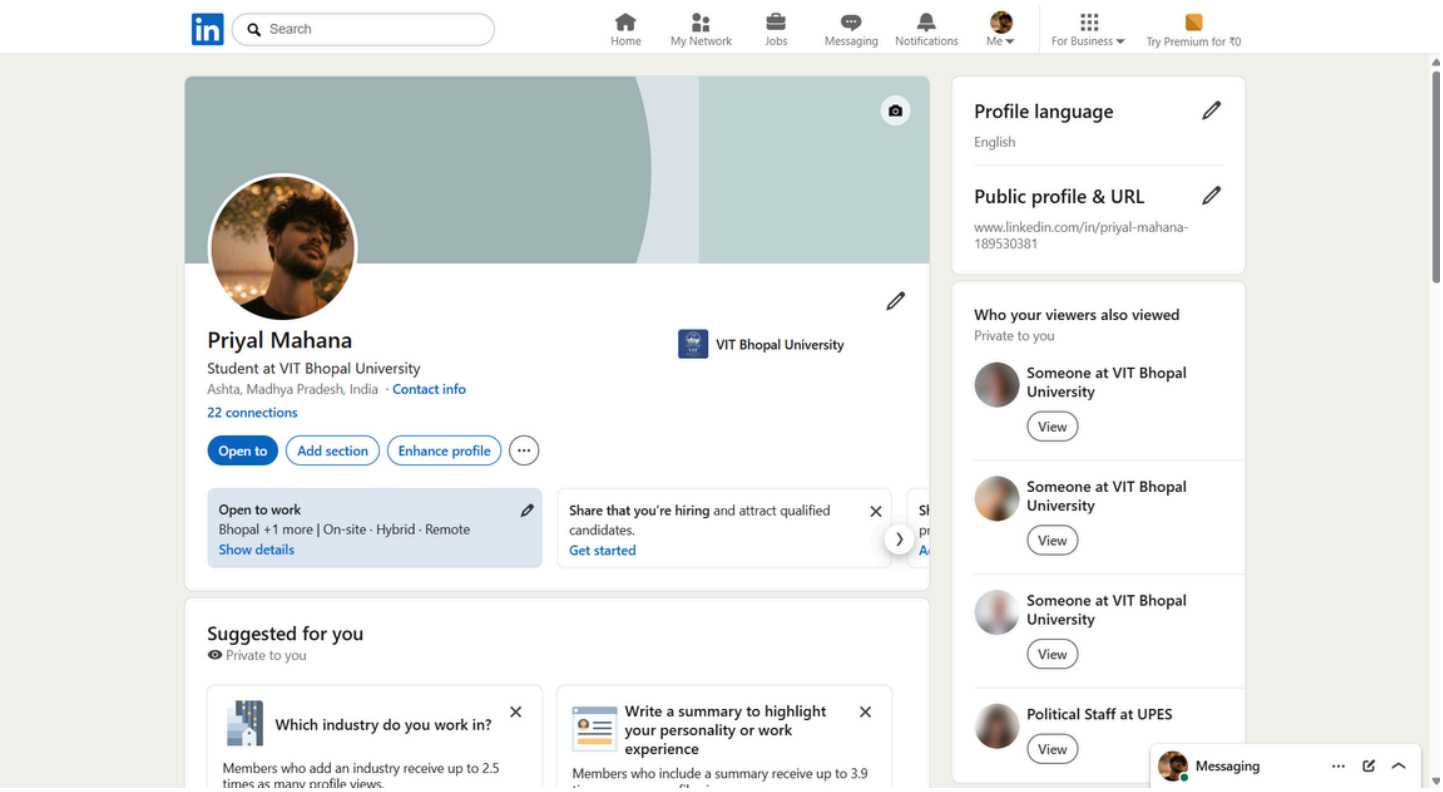
I created a profile README repository (PriyalMahana - Overview) containing: My name, branch, year, and the sentence — I am a first-year CSE student at VIT Bhopal, eager to learn Python, web development, and contribute to open-source projects. I plan to use GitHub for all semester projects and assignments over the next four years.



2. Linkedin — Priyal Mahana

LinkedIn is the leading professional networking platform used by recruiters, companies, and academics worldwide. Having an up-to-date LinkedIn profile is increasingly expected by employers and internship coordinators.

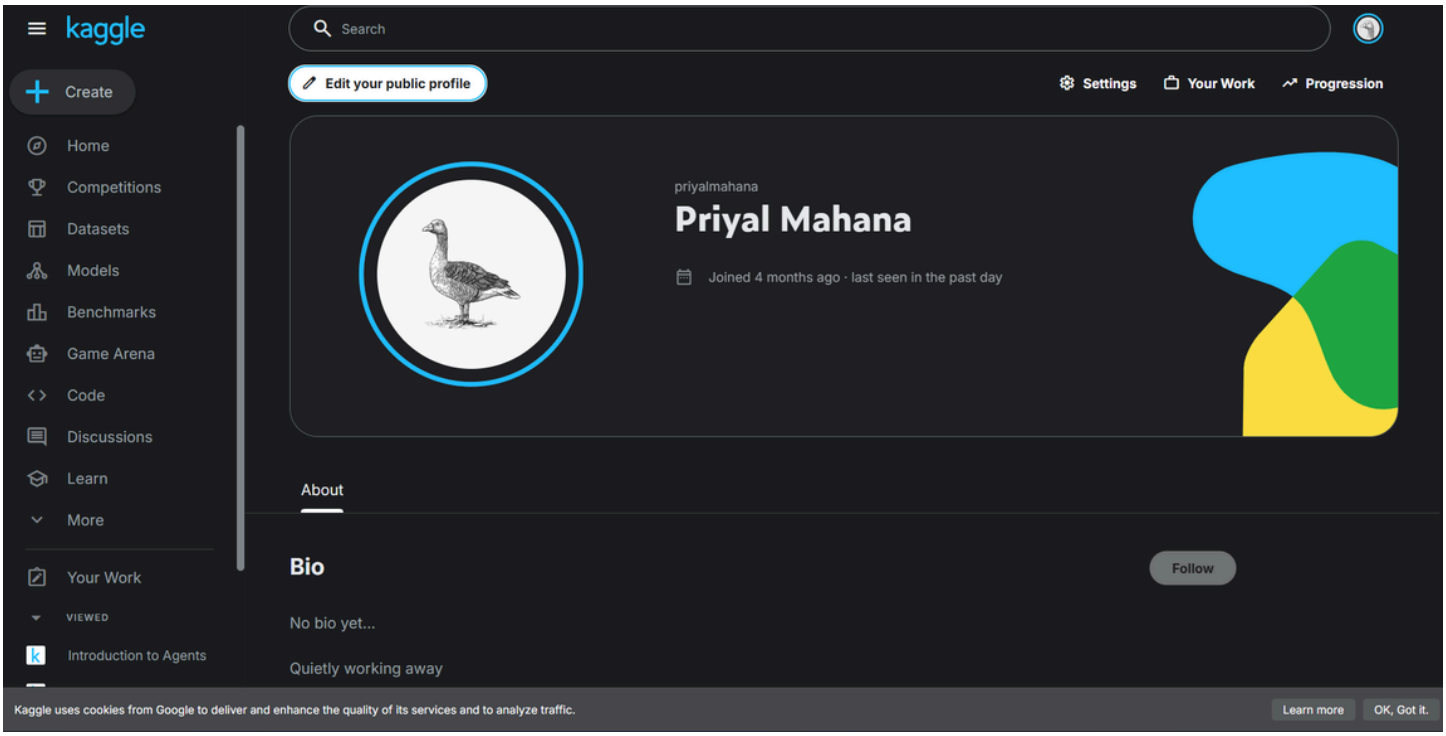
I filled in my Education section: B.Tech in Computer Science Engineering, VIT Bhopal University, expected graduation 2029. Over four years, I plan to add internships, projects, certifications, and skills as I gain experience.



3. Kaggle — k Priyal Mahana

Kaggle is a data science and machine learning community where students explore datasets, share notebooks, and compete in challenges. It is widely recognized in the data and AI industry.

I set up a basic profile and enrolled in the free Python micro-course. I plan to engage more actively from second year when I begin learning data structures and machine learning fundamentals.



Reflection:

Setting up these three profiles taught me that a professional digital presence needs to be built deliberately and maintained consistently. Each platform serves a different audience: GitHub signals to future employers what I can build and how I work; LinkedIn shows academic background and professional trajectory; Kaggle demonstrates interest in data and analytical thinking.

The most valuable part of this task was creating the GitHub profile README. Writing even two or three sentences about what I hope to learn forced me to think concretely about my goals for the next four years, rather than just vaguely wanting to learn coding. It made my academic plan feel more real.

Over the next four years, I plan to update all three profiles every semester — adding new projects on GitHub, new experiences on LinkedIn, and completed datasets on Kaggle. My goal is to have a portfolio that tells a coherent story of growth by the time I reach my placement year in 2028–29.
